# Tough but sensitive — High performance with industrial strength 316L stainless steel electrode

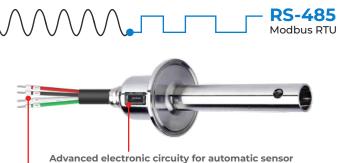

The ProCon<sup>®</sup> C350 series double electrode conductivity sensor transmitter has been proven to operate seamlessly in industrial applications up to 2,000µS/cm.

Measuring specific conductivity of aqueous solutions is becoming increasingly important for determining impurities in water.

The ProCon<sup>®</sup> line of analytical sensor transmitters have been designed for difficult industrial applications and to outperform even in extreme conditions.

The 4-wire or RS485 output options simplify calibration and communication with remote displays and controllers.

Always ask for **ProCon® C350** by name to be sure you are getting a genuine **Icon Process Controls** product.

Advanced electronic circuity for automatic sensor recognition ensuring trouble-free calibration when connected to the ProCon<sup>®</sup> controller

## ProCon<sup>®</sup> — C350 Series Conductivity Sensor Transmitter

• Corrosion-Free Instrumentation Equipment

#### **In-line Mounting**

- 1. If air is present, avoid vertical installation (okay if pipe is full).
- 2. Optimum installation 15° above horizontal.
- 3. Process liquid should flow upward. (for downward flow ensure backpressure is present in order to avoid air within pipe)
